

2. HAIRKARE SYSTEM

HAIRKARE SYSTEM has been designed to **treat the main types of alopecia** in a personalized way for each patient, with a **treatment adaptable to their needs** according to their lifestyle and / or the pathologies associated with hair loss.

It is the most common type of alopecia and **affects 1 in 2 men and 1 in 3 women**. People with genetic predisposition suffer from an **increase in the production of DHT** (*Di HidroTestosterone*).

ANDROGENIC
ALOPECIA

It causes the appearance of partial clearings with rounded appearance, in the head or other areas of the body. **It affects 1 in 1,000 people** and its origin can be genetic or by **alterations of the immune system**.

AREATA
ALOPECIA

HK
SYSTEM

It is the second most frequent type of alopecia. It is characterized by a diffuse, reversible and sharper fall than the androgenetic.

It is related to numerous causes: **micronutritional imbalances**, hormonal changes, stress, obesity, etc.
